

first choose the icon that opens the manage MIDI devices.

The screenshot shows a software window titled 'MIDI devices' with a menu bar (File, Edit, Help) and a toolbar. It is divided into two main sections: 'Play devices' and 'Record devices'. The 'Play devices' section contains a table with columns for 'Device' and 'Connection'. The 'Record devices' section contains a table with columns for 'Device', 'Current', and 'Connection'. A yellow callout box with a red border contains the text 'first choose the icon that opens the manage MIDI devices.' Two red arrows originate from this box: one points to a MIDI icon in the top-right system tray, and the other points to the 'MIDI hardware input device' row in the 'Record devices' table. A 'Close' button is located at the bottom right of the window.

Device	Connection
General MIDI Device	20:0 UA-25 MIDI 1 (duplex)
out 2 - MIDI external device 2	14:0 Midi Through Port-0 (duplex)
out 3 - MIDI output system device	No connection
out 4 - out 4 - out 4 - New Device	No connection

Device	Current	Connection
MIDI hardware input device	<input checked="" type="checkbox"/> Yes	20:0 UA-25 MIDI 1 (duplex)
MIDI input system device	<input type="checkbox"/> No	No connection

And then with the drop down menu you choose to use your midi device, UA-1EX or UA-25, and if you have a sound card, that is supported, and have midi connections, you will probably get that devices as a choice to.
